Will we recognise the university of the future?

By Andrew Rothwell - 1 October 2015

Following yesterday’s article looking at the future role of shared services in higher education, Andrew Rothwell and Ian Herbert of Loughborough Universities’ Centre for Global Sourcing and Services highlight how digital relationships and offshoring will transform universities – and possibly secure their survival.

Some north American and Australian correspondents have predicted the demise of many institutions due to institutional mergers and changing demand patterns, with widespread redundancy of academic and professional support staff as a result. Others predict the rise of the ‘high-brand’ global university, with superstar academics delivering masterclass-style lectures to tens of thousands of remote students, simultaneously – and with the potential for each to rewind and review. After all, who wouldn’t want to be taught retail management by the ‘Queen of Shops’, or innovation by James Dyson?

A more measured view from a 2013 IPPR report asks – why should universities be immune to the kind of changes that have already transformed business and
some other public organisations through the forces of technology and
globalisation?

We support this view. In our lifetimes, indeed, in the last three decades, we
have seen the virtual disappearance of much of the UK automobile and
motorcycle industries – where are they now? Could this happen to UK
universities? Based on our case organisations, and more recent insights from
key informants in the higher education sector, we offer some predictions of our
own.

First, it seems crazy that the dominant model of teaching in many subject areas
remains the traditional lecture, just as it has been for decades. Digitally
connected students may well expect lectures to delivered by global leaders in
their respective field, directly to their hand-held devices, or, as one of our key
informants suggested maybe “harness the learning from innovation in computer
games”. At the same time, they value tutor contact, and can seem surprisingly
dependent – does this have to be face-to-face?

Offshoring

Second, we predict the extensive offshoring of student support and registry
functions, whether though ‘captive’ shared service centres or third party
organisations. Again, as one of our respondents suggested, the cloud is
administered outside the UK anyway – offshoring by another name. Third, we
predict much greater use of automation, whether this be through self-service in
student administration processes or the re-engineering of back-office processes.

The great questions for us are not so much about the managerial, globalisation
and technology factors – these are well-known, inevitable and relentless. The
real issue is what will happen to student learning? Indeed, what will students
expect and how will institutions deliver against those expectations?
So while we can confidently expect universities to adopt many business innovations to complement their own unique take on shared services and outsourcing, it is the academic domain where we believe the biggest changes will take place. Most universities haven’t begun to harness the power of digital innovation in this respect, and most of their staff may be ill-equipped to do so.

Finally we need to focus on our students. What is their psychological contract? Is what we offer actually worth getting into debt for? Will international students continue to see the UK as a destination of choice? To summarise, UK universities have achieved remarkable things in the last decade. The next two decades will, we believe see a complete transformation of the sector. Let us hope it is one that we can manage, and master.

Read the first part of these twinned posts – Are we really competing? Should we be collaborating?

Ian Herbert and Dr Andrew Rothwell are based at The School of Business and Economics, Loughborough University. Their longitudinal research on shared services has been supported by the Charitable and General Trust of the Chartered Institute of Management Accountants and Universities UK.
