Child poverty map of the UK
November 2016
Compilation of child poverty local indicators, update to December 2015

Laura Valadez and Donald Hirsch, Centre for Research in Social Policy, Loughborough University

Where child poverty is highest

In the UK, over one in four children are living in poverty once housing costs have been deducted from their income. According to official child poverty data (HBAI – table 4.14ts), the proportion below 60 per cent of median income after housing costs rose from 27 per cent in 2012/13 to 29 per cent in 2014/15.

Estimates of local child poverty rates show that it is the highest in large cities, particularly in London, Birmingham and Manchester. As Table 1 illustrates, among the twenty parliamentary constituencies with the highest levels of childhood poverty, seven are located in London, three in Birmingham, and three in Manchester. Birmingham Ladywood has the highest figures of child poverty with 47 per cent, followed by Manchester Central with 45 per cent, and both Poplar and Limehouse and Birmingham Hodge Hill with almost 44 per cent. There are also important pockets of child poverty in areas of Leeds, Liverpool, Middlesbrough, Sheffield, Nottingham, and Glasgow, with figures of around 40 per cent.

At the local authority level (Table 2), Manchester as a whole has a higher rate of child poverty than Birmingham (40% vs 37%). An interesting change is that, compared to 2013 figures, child poverty in some areas of London seems to have been reduced. In 2013, three London boroughs had 40-50 per cent of children in poverty (AHC). In the last quarter of 2015, only Tower Hamlets, the local authority with the highest proportion of child poverty in the UK, has a child poverty rate in this range (43%). Nevertheless, four of the five local authorities where poverty is highest remain in London.

Focusing on a more local level (Table 3), in 21 electoral wards more than 50 per cent of children live in poverty after housing costs.

Where child poverty is lowest

The parliamentary constituencies with the lowest levels of child poverty (AHC) are Gordon, West Aberdeenshire and Kincardine, Sheffield Hallam, and York Outer, with figures between 9 and 10 per cent (Table 4). The constituencies of both David Cameron (Witney) and Theresa May (Maidenhead) are among the 20 with the lowest child poverty.

At the local authority level (Table 5), only Wokingham and Shetland Island have child poverty rates of around 10 percent, once housing costs have been taken into account.

The local indicators in this report:

The figures presented in this report are based on tax credit data, used to estimate the percentage of children on low incomes in local authorities, parliamentary constituencies and wards across the UK. They also use national trends in worklessness to estimate recent changes in the number of children who are in poverty because their parents have lost their jobs, to update the local tax credit data which is more than two years old.

This is not a direct measure of exactly how many children are in poverty on the official definition, but is based on the closest to an equivalent measure we have of local levels of child poverty. The data have been adjusted to produce figures compatible with the measures derived from the national survey of income, showing how many children live in households with below 60 per cent of median income. Specifically, the adjustments ensure that the total reported level of child poverty, before and after housing costs, is similar when adding up all the local figures as the official national totals. Thus, the local data gives an idea of the relative poverty levels in different areas, but are adjusted to estimate what these actual levels would be if they could be measured on the same basis as the national household income survey.

The local data starts by classifying children in poverty if they live in families in receipt of out of work benefits or in receipt of in-work tax credits where their reported family income is less than 60 per cent of median income. This indicator, compiled officially as a local estimate of child poverty, has been reported for August 2013 by HMRC. However, on its own it provides an inaccurate picture of actual child poverty, considerably overstating the numbers in out-of-work poverty and understating the numbers in working poverty. While these factors may balance out overall, they can seriously misrepresent the overall trend where working and non-working poverty change in different ways, as well as misrepresenting local differences where working poverty is relatively more important in some areas than others. Therefore, the figures include an upward adjustment in the in-work figure and a downward adjustment in the out-of-work figure. The adjustments are made separately to for AHC and BHC estimates, in each case according to how the total of the local estimates compare to the actual national measure. Figures are then updated, taking into account Labour Force Survey data on the number of children in non-working households for the final quarter of 2015.

A methodology paper provides more details about the calculations.
