Discourses are shared ways understanding the climate system is unequivocal, associated impacts are beyond the rest of the world, often with a greater focus on climate justice and a contrarian climate change motivated by science (or not). Discourses are conforming with or against science; in contrast to contrarian rhetoric there is a symbiosis between this and the mainstream. In this analysis we locate the discourse of the climate system and impacts in contrasting discourses. The method is described in the methodology.

Methodology

This poster illustrates organizations and individuals active in the United States, the United Kingdom and Canada, as well as their connections and affiliations. The analysis includes a comprehensive list of organizations and individuals, as well as their affiliations and connections. The method is described in the methodology.
