Owing to the ease with which carbon atoms unite to form chains and rings, the element forms a large number of compounds. Carbon is a product of most organic remains, especially those composed of natural g

“Economy” is here used in its etymological sense of “law” (nomos) of the “house” (oikos) and as a counter-balance to the Unheimliche (uncanny/un-homely).

I returned and scratched on the tree, bloody as usual, and by now the lines were once more justified. I announced that we were going for an elliptical traverse, a ride, and put it on the donkey. I then used its nose as a pencil and was drawing out charcoal with a sheepskin eraser whilst dousing the fire with buttocks dipped in a bucket of ink. I came to what we agreed was the end of a dot in motion, and there stood standing, whilst naked, an inconsistent and enigmatic line, within and through the frame, combing its various hairs with graces, but from behind hollow out, like a trough for kneading lead. And I was told where the donkey is but the view was still out of sight.

I was pleasantly startled, for I recognised it as The Uncanny [in Drawing]. I said nothing, however, but carefully and slowly turned around and went to the Sand Man to convey what was occurring. The Sand Man advised: “Get a tub-cart and Traverse the line and the consequences to the extended field, but you must sit on the donkey that ate the pencil and them with your teeth, and don’t have any knots the knothole about you; tie everything with slip-knots. When you get out into the middle at the point furthest from either end, you must ride away from them, but don’t turn around until you get to the beginning.”

Carbon are known, namely diamond and carbon, previously described as amorphous.

Charcoal is formed when substances such as wood are heated in the absence of oxygen. Charcoal is obtained by heating the residuum of wood, past the point of swelling. Charcoal is a by-product of the manufacture of wood pulp and wood tar.

Charcoal is formed by heating charcoal gas. Thus charcoal is a by-product of the manufacture of ammonia gas. Volumes of ammonia gas are obtained in this respect. Volumes of charcoal gas are obtained in this respect.
Carbon 14

Donkey is Easel. The German word for a sitting easel is an artist's easel and Donkey. A

Carbon 14

Donkey is Easel.

A serpentine underlining could have been a conclusive flourish — but no such thing exists.
